DETAILED ACTION

Allowable Subject Matter

1. Claims 13-18 allowed.
2. Claims 5-12 objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

1. Claims 1-4 rejected under 35 U.S.C. 103(a) as being unpatentable over Taira et al. (6,667,782) in view of Ota et al. (6,540,377) further in view of Laine (6,256,447) further in view of Allen et al. (6,111,696).

Regarding Claims 1-4, Taira et al. disclose a light guide apparatus, a backlight apparatus and liquid crystal display apparatus where a backlight apparatus and light guide and liquid crystal display apparatus incorporating the same includes a wedge-type light guide having a refractive index n_1 and having a top surface, a bottom surface and a side surface, a light source for directing light to the side surface of the wedge-type light guide, a first light transmission layer having a refractive index n_2 , which is smaller than the refractive index n_1 , and having a top surface of the first light transmission layer is attached to the bottom surface of the wedge-type light guide, and a light deflecting layer having a top surface attached to the bottom surface of the

first light transmission layer for deflecting the incident light from the first light transmission layer toward the top surface of the wedge-type light guide. Taira et al. fail to disclose the required LED, light directing elements and light directing elements in the required configuration. However, Ota et al. disclose a full-color light source unit where the required LED structure is disclosed. Furthermore, Laine discloses a backlight for correcting diagonal line distortion where the required light directing element is disclosed. Finally, Allen et al. disclose a brightness enhancement film where the required light directing element in the required configuration is disclosed.

It would have been obvious to one of having ordinary skill in the art at the time the invention was made to include the required LED, light directing element and light directing element in the required configuration in Taira et al. as taught by Ota et al., Laine and Allen et al. respectively in order to have a LCD backlight structure with higher performance.
